The Deep Things of God

Joel Akin

When money falls from the sky men will weep. Some may cry for fear and others for joy. For when money falls from the sky that which they longed for most will be like manna from heaven. They will eat it and savor it and save it up until the worms come to devour it. Yet in a way that is the way life is. We are in a process of decay and all life under the system of time is caught in the cross hares. Now if we meet up with a nasty hare then we should paddle away as quickly as possible lest we find ourselves in deep water. If we seek out knowledge and hope to find it then when we meet it face to face and understand its ramifications then we have to stand up and shout Eureka. For Eureka is like the gold rush of the future. It is the knowledge that comes to men when they seek for the deep things of God. And God takes out their old knowledge, like a bad Wisdom Tooth, extracts it, but reinserts it. Now that sounds contrary to good wisdom but that's only because we mere humans, mirrored as we are by Time and Chance and Circumstance, face infection all around us. And we have to seek God so He can take out the old, heal the wound and put back things into place so we're not constantly feeling the old wound with our tongue.

Lets be honest if the tongue is like fire and we spread garbage then that garbage will burn. But what about the person who likes garbage? Well, the garbage of the future might just be different then the garbage of the present. For the present of garbage is like the hole that can't be filled. For that which festers is that which cannot be reached. So a way has to come for the hole to raise up the fester so it can be healed. Now this doesn't sound like new energy but hang on to your hats cause I like to get deep.

Now every molecule is caught up in a fire right now. That fire is burning away the dross. Now the dross is the garbage, like Sin, that rears up on occasion as an infection in the body. It has to be dealt with lest it spreads. So Time arrived and said I will cover the cost of the infection. And he created a circumstance which allowed all things to follow a predestined course back to himself. Now when time is carried forward, as it was, all molecules have to follow the transit of time. Time carries things forward and they are spread out over time by the replication of

thought. Each man, woman, child becomes part of the breath and each one using a matter of thought, becomes part of the energetic solution of things that matter.

Now if energy is part of the solution for man then man needs to understand that energy is part of the solution to time. For keeping pain enclosed in a Wisdom Tooth is like trying to rear a tiger and that is like trying to stick a needle in the butt of a monster like Leviathan. For the pain Levi feels is like the pain you feel when Leviathan, Sin, tries to rise up out from that which was his roosting place. Only by having him safely enclosed first could that be done. And circumstance had to be in place before that could be accomplished. And that meant a harpooner or dreamer had to stand there and taunt Leviathan until he was ready to kill or be destroyed.

Now Leviathan is not the source of energy. He just taps into the root and festers it so Wisdom has to rise up and try to curtail the source of it. Thus tooth or truth has to stand guard until someone crowns her. And crowning the tooth or truth is not easy if Truth is hard. For finding a capstone for these things is like finding Hope in the midst of despair.

So if we can't get our energy from Leviathan then where does it enter the picture? The answer isn't in things that burn but things that grow. Growing things utilize energy and energy, though some will say is burnt up, is actually transformed.

Transformation of energy is the clue to changing the nature of the future for mankind. Transforming energy is like taking chalk and using it on the blackboard to write out an equation. So lets try it with the chalk dust of these molecules of energy that are spread across the screen. Each microt of energy is expended by hands that process the ideas. The ideas are transformed into thoughts which become part of the process of change. So if you can see the blackboard and read these words then you are the path to transformation.

Now changing ones mind is like changing the solution. So lets find a solution to transforming energy. If chalk were the source of new energy we would have to find a way to transform it. Now if we wanted to turn lead into gold you could talk to a marketer. He would tell you that lead, the metal, doesn't work well. So he'll give you lead and call them leads. And he'll say here is the first part of a network. Now you go out and sell this lead to someone and they sell it to someone and so on until it turns to gold for you. Now that kind of lead generally remains lead unless you can

prove that gold comes to all who participate. Now that is the dream but the reality is often different because there always has to be a new lead to begin with. And that new lead is still going to have to be dug up somewhere from the earth.

Now the lead to gold solution is the old method. It was tried by the Alchemists and it was tried by the networkers and it was tried by the preachers. And it generally has fallen by the wayside for it doesn't work all that well. But if there were a transformational idea which worked on a different level, now that would be an idea that people would grab onto and shake and stir it until it brought home the bacon.

Now if bacon sounds good on the fire then fish sounds good also. And not just fish but beef and lamb and all kinds of meats for the fire. Yet we men who search for answers to shake the stars from the course cannot see a way in the natural to transform the need for energy into a solution. Its like trying to find a new way to fish or a new way to swim or a new way to sink.

First for their simplicity. Man carries knowledge and some wisdom but the understanding eludes him. He can take heat and energy and salute it but it doesn't move into the fullness of expenditure. He can take ideas on knowledge and transform them into a thousand different directions, like communications, and yet not see the fullness of dimensions. There are things about energy that are expended and that are needed for man to utilize before he can see the fullness of usage. For example if you cast down a tree in the forest it will be useful in only one way. And that is to send it to the grave in fire. But if you could tap the root of the tree and use it as a source of energy then it would be useful. How do you do this? By watching television and seeing that TV is the one method of watching but not the method of seeing. If you watch TV and it is the only way to see then there are thousands of methods left without usage. For example I could send a message to men by thought wave and they would laugh. but if I, as God, created a man named Joel to ask me how to come up with a new method of using energy then it would be difficult. That is unless I tried to bring it up to a place where it would happen. So, I then take the root of the tree and find it is filled with energy from sap. Sap is the part of the tree that brings life to the tree. And it is the part that is sweet to man.

Now if I take the sap and throw it to the fire I burn away the energy by using the fire. If I use the fire of the energy then I

find it is filling the air with smoke and makes smog. If I tap a root then I am using the knowledge that is given to us by God. Now God helps me write this and sometimes takes authority so it is held on track. So don't get spooked when he speaks of these things.

Now the root of the tree is like a hydroelectric dam. Each root is filled with pressure and each fount of pressure is inserted into the ground so that the pressure of the root is filled with fluid. And if the fluid is filled full then the pressure is like that in the body of man. Each pound of pressure then multiplies as it goes deeper into the ground. The ground becomes the source of strength for the tree but not the source of strength for the root. The root is the key to the tree obtaining the necessary nutrient or nutrients but not the source of its power. That is the sun from which the life on earth obtains its power to move.

To obtain the pressure of the root is like obtaining a hand to lift up a rock. It can be done alone but it is difficult. So to raise a root means taking a root and dissecting it so it is laid open. In the root are layers called cadmium and a record of the history of the root. There are other structures there but the main part of the root is still open. Now if you want to see the root you have to raise it up which reduces its power. And if the power of the root is raised it is useless for power. So you then need to take the root and move it another way. By lifting the power into a rod.

Now a rod is like a powerful tool of time and it is still the only gift that is made from heaven. For if the tool is broken the rod is useless. And if the rod is broken then the tool is worthless. So if the time of this story is that there is sin then sin wants the story to end. For it is interesting but not filling. And filling means giving up that which we need most. Time. For the infection of the root is the key to that which time gives. For we know that if man destroys the root the tree will die. But if you can steal the storm then the rod will dwell. For the rod is the lightning rod which is attracted to the high pressure of tree sap. For the sap is like a blood let and if there is pressure of the sky then the pressure of the root will release some of the sap and it will let it ride up into the heavens on the lightning. Now that sounds foolish but think of this story as a mystery. For time is like a tree and the tree is a record of this story. And if a record is broken then the tree is cut to reveal its story.

And if the story is true then the root of the tree is the source of sap which is the source of energy for the lightning. But if the

lightning is the atmosphere then why does sap play a role in this? The answer is it is not the sap at all but the pressure that the root gives to the soil. For the soil contains the pressure and it builds up until a spark is gathered. Now that spark is part of the story for it isn't enough to collect. You need a forest for that. And there are plenty of forests out there where you could experiment with this.

So, lets say that you took a lightning rod and placed it at an angle of 32 degrees and then watched the angle change by a magic of two degrees. Now a magic of 2 degrees means you wait for the rod to change to a temperature equal to the root of the tree. Then the tree becomes the focal point for the rod. And if the rod is then carried to a point in the story where it is felled it would lose its potency. So you have to find a way for the rod to remain at 32 degrees. Then when it is filled with potency the spark is carried up to a new place we'll call a collector.

Now the collector doesn't have to be on earth. It could be in outer space where it gathers energy. Energy from earth? That sounds far fetched. So hang on as this is my friend God speaking to you on an idea. And ideas from God are worth their weight in gold

The weight of a rod is the weight of its balance. So if the rod is balanced in the middle it would weigh about 30 pounds. If the weight of the rod is balanced in the middle it is the middle of the rod which would be about an inch in circumference. This is sharp so keep it stable with a plastic top.

The top of the rod could be held stable with stays underneath made of brightly colored plastic. This would stabilize the rod and give it something to lean on to keep it at the required degree. If this sounds dumb its okay to say so but remember that new ideas are dumb to begin with.

Now there doesn't seem to be anything to collect with. And if this is the case how can you prove that energy comes from trees? If this is the thought then hold on to a rod during a thunderstorm but not when lightning strikes near you. For the rod would energize and if it does the spark would shoot out from the rod for a distance of a foot. And if that foot is part of the spark it could be deadly. So that is the danger side of it.

If you want to know how the collector works then add it to a phrase 'to be continued.'
